PTM: Heavily N- and O-glycosylated.

SIMILARITY: Belongs to the protein-tyrosine phosphat Receptor class 1/6 subfamily.

SIMILARITY: Contains 2 fibronectin type III domains.

SIMILARITY: Contains 2 protein-tyrosine phosphatase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          tyrosine + phosphate.

           PTM: Heavily N- and O-glycosylated.

SIMILARITY: Belongs to the protein-tyrosine phosphat Receptor class 1/6 subfamily.

SIMILARITY: Contains 2 fibronectin type III domains.

SIMILARITY: Contains 2 protein-tyrosine phosphatase DATABASE: NAME-PROW; NOTE-CD guide CD45 entry;

CC endoplasmic reticulum to produce disulfide bonds. Acts by
coxidizing directly pdil isomerase that oxidizes proteins in the
CC coxidizing directly pdil isomerase through a direct disulfide
coxidizing directly pdil isomerase through a direct disulfide
coxidize all pdi related proteins suggesting that it can
discriminate between pdil and related proteins. Its reoxidation
CC discriminate between pdil and related proteins. Its reoxidation
cc significant proportion of reactive oxygen species (ROS) in the
CC ecll, threeby being a source of oxidative stress (By similarity).
C. -i- CUBNIT: May function both as a monomer and a homodimer (By
CC similarity).

Novel peptide comprising leukocyte antigen binding peptide of human CD45 polypeptide, useful for producing activated cytotoxic T lymphocytes, for killing cancerous cells e.g. leukemia.

Claim 2; Page 38; 56pp; English.

The invention discloses a peptide comprising the human leukocyte antigen (HLA)-binding peptide of human CD45 polypeptide, its portion or variant, provided that the peptide is not the intact human CD45 polypeptide. The peptides are useful for producing activated cytocoxic T lymphocyte (CTL) in vitro which involves contacting the CTL with an antigen-presenting cell, where its major histocompatibility complex (MHC) class I molecules are loaded with the peptide, to activate, in an antigen specific manner, where the CTL and the antigen presenting cell are allogenic with respect to the class I MHC molecule that is presenting peptides of CD45. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antigen-presenting cell contains an expression vector including the polymucleotides encoding the CD45 peptides. The activated CTLs are useful for killing, and in the manufacture of a medicament for, target cells corresponding the CD45 peptides in a patient. A T cell receptor (TCR), recognising cells expressing the CD45 peptides, is useful for killing target cells (cancer cells) in a patient which involves obtaining CTLs from the patient, introducing into the CTLs the polymucleotide encoding the TCR and then introducing the cells thus produced into the patient who has undergone an allogenic stem cell transplantation. Tumour reactive CTLs have been shown to mediate tumour regression in animals models by the inhibition of colony forming unit-granulocyte macrophage (CFU-GM) colony formation. The cancer is leukaemia which expresses the CD45 polypeptide. The method is useful as an immunotherapeutic for treating a patient with haematopoietic malignancy or to target and kill cells which express the CD45 polypeptide. The advantage this method provides is that the CTLs destroy the malignant haematopoietic cells but not the transplanted cells. The sequence presented is the peptide, huCD45/900, comprising an HLA-binding peptide of human CD45
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

The invention relates to an isolated RNA encoding a protein tyrosine phosphatase designated as PTPH1 appearing as ADD22992. Also included is a retroviral vector comprising the RNA. The RNA is useful for treating or preventing a condition in which abnormally high levels of phosphotyrosine occur in a mammalian cell (which involves introducing into the mammalian cell and agent which comprises DNA or RNA encoding all or a portion of a PTPH1, under conditions sufficient to express PTPH1 where the polypeptide can catalyse dephosphorylation of tyrosyl residues that are phosphorylated through action of a protein tyrosine kinase. The RNA is also useful for reversing a malignant phenotype of a mammalian cell which is associated with tyrosyl phosphorylation catalysed by a protein tyrosine kinase. The DNA or RNA is delivered via a recombinant retrovirus or a recombinant vaccinia virus. At least one tyrosyl residue that is dephosphorylated by the protein tyrosine phosphatase polypeptide can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   domain (PD) invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               phosphatase activity. The method is useful for identifying a compound that modulates the phosphotyrosine phosphatase activity of a polypeptide and for identifying susceptibility to cancer, diabetes or other diseases associated with alterations in cellular phosphotyrosine metabolism. The present sequence is human leukocyte common antigen (LCA) phosphatase domain (PD) 1. This sequence is used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; enzyme; protein tyrosine phosphatase; PTPH1; cytostatic;

                                                                                                                                                                                                                                                                                        The present invention provides substrate trapping mutant protein tyrosine phosphatases (PTPs). They can be used to reduce the activity of tyrosine phosphorylated proteins and to screen for modulators capable of altering the binding of protein tyrosine phosphatases to their substrate. These may be used in disease diagnosis and treatment
                                                                                                                                                                                                                                                                                                                                                                                                                               New substrate trapping mutant protein tyrosine phosphatases which the wild type PTP catalytic domain invariant aspartate with an unphosphorylated amino acid, useful in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          aberrantly phosphorylated by pp60(V-src). The RNA is useful for treating or preventing malignancies such as breast cancer and leukaemia. The present sequence is a PTP similar to PTPH1.

```

```
The invention relates to identifying agents which alter the interaction between a protein tyrosine phosphatase (PTP) and a tyrosine phosphorylated polypeptide using fluorescence energy signals. The methods are useful for performing screening assay to identify agents that alter PTP binding to and PTP-mediated catalytic dephosphorylation of phosphotyrosine peptide substrates. The present sequence is that of a catalytic domain of a PTP for comparison with human PTP1B (AAG78262)

The invention relates to a novel method for identifying an individual who CC chas an altered risk for developing myocardial infarction. The method CC comprises detecting a single nucleotide polymorphism (SNP) in any one of CC nucleic acids, where the presence of the SNP is correlated with an CC altered risk for myocardial infarction in the individual's CC nucleic acids, where the presence of the SNP is correlated with an CC the specification or its isolated nucleic acid molecule comprising at least CC further comprises; an isolated nucleic acid molecule comprising at least CC entriguous nucleotides where one of the nucleotides is an SNP given in CC the specification or its complement and encoding any one of the amino CC acid sequences given in the specification; an antibody that specificatly binds to the polymetide or its antigen-binding CC fragment; an amplified polymucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in CC length; a kit for detecting an SNP in a nucleic acid, comprising the CC polymucleotide, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid molecule; a method of detecting an SNP in a nucleic acid molecule; and a enzyme; a method of detecting an SNP in a myocardial infarction. The novel detection method has cardiant activity. The method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction. This composition for treating or preventing myocardial infarction.

                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a method for identifying a protein tyrosine phosphatase (PTP) that is reversibly oxidized in a cell by: (i) subjecting a sample, including a cell that contains at least one PTP, to conditions that cause reversible oxidation of PTP; (ii) isolating PTP anaerobically, in presence of a sulfhydryl-reactive agent (II) that irreversibly modifies the thiol group of an invariant Cys in the active site of PTP; and (iii) determining, under reducing conditions, the level of dephosphorylation, caused by PTP, of a labelled substrate (III), where dephosphorylation indicates that an active PTP is present. No details of tests for these activities are given. The method is used to identify reversibly oxidized PTP, also to identify sugents that: (a) reversibly modify such PTP; or (b) alter inducible signalling pathways in which PTP are involved. These agents are potentially useful, in human or veterinary medicine, for treating abnormal cell proliferation or growth (cancer); medicine, for treating abnormal cell proliferation or growth (cancer);
                                                                                                                                                                                                                                                                                                                                           guest vs. host disease; autoimmune diseases; allergy or other immunosuppressed states; metabolic disorders and cell-cycle abnormalities. This sequence represents one of the PTP enzyme

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polypuloma. Colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an accompany of the contraction of the polypeptide and polypeptide and polypeptides are also useful for screening agents for treating the above mentioned diseases. This sequence represents an accompany of the polypeptide and polypeptide and polypeptide and polypeptide and polypeptides are also useful for screening agents for treating the above mentioned diseases. This sequence represents an accompany of the polypeptide and poly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Translational profiling; expressed protein tag; EPT; kinase; phosphatase; protease; protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; MHC; major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    transporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polynucleotides are particularly useful for treating or preventing myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an interest of the color of the co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Translational profiling; expressed protein tag; EPT; kine protease; protease inhibitor; transporter, cytoskeletal preceptor; transcription factor; cancer; MHC; major histocompatability complex; myeloma; colon cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        expressed protein tag (EPT) isolated from human tissue for transfiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma or
                            29-JAN-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 28-MAR-2001;

cc fragment of a kinase, protease, protease inhibitor, cramsporter, cytoskeletal protein, receptor or transcription factor. The collection of the purified solution and composition for eliciting in a composition and composition for eliciting in a composition and composition for eliciting in a composition of the purified composition for eliciting in a composition for the purified composition of the purified composition of the purified this collection or class II MHC-binding polypeptide. The polypeptide is also collection cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, cutreating the above mentioned diseases. This sequence represents an composition of the composition but was obtained in electronic format directly from MIPO at the collection but was obtained in electronic format directly from MIPO at concerning compositions and composition but was obtained in electronic format directly from MIPO at concerning composition and composition of the collection but was obtained in electronic format directly from MIPO at concerning composition and composition of the collection but was obtained in electronic format directly from MIPO at concerning composition and concerning composition for many composition and concerning composition and concerning composition for many composition for the content of the concerning composition for many composition for many composition for the content content composition for many composition for many composition for many composition for many composition composition for many compo

The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polypucations are particularly useful for treating or preventing
                                                                                                                                                                                                                                                                                                                                                           myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Translational profiling; expressed protein tag; EPT; kinase; phosphatase protease; protease inhibitor; transporter; cytoskeletal protein; receptor; transcription factor; cancer; MHC; major histocompatability complex; myeloma; colon cancer; gastric cancer; adenocarcinoma; sarcoma; melanoma; lymphoma; leukaemia.

The invention relates to a method for identifying a protein tyrosine CC phosphatase (PTP) that is reversibly oxidized in a cell by: (i) CC subjecting a sample, including a cell that contains at least one PTP, to conditions that cause reversible oxidation of PTP; (ii) isolating PTP CC anaerobically, in presence of a sulfhydryl-reactive agent (II) that CC irreversibly modifies the thiol group of an invariant cys in the active city of the property and (iii) determining, under reducing conditions, the level of dephosphorylation, caused by PTP, of a labelled substrate (III), where CC dephosphorylation indicates that an active PTP is present. No details of tests for these activities are given. The method is used to identify reversibly oxidized PTP, also to identify agents that: (a) reversibly conditions, for treating abnormal cell proliferation or growth (cancer); guest vs. host disease; autoimmune diseases; allergy or other cc immunosuppressed states; metabolic disorders and cell-cycle invention

The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated protein of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                              Alzheimer's, Parkinson's disease, Huntington's disease; haemostatic, amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue

                                                                                                                                                                                                                                                                                                                                                                                                                       immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention describes a purified polypeptide, which comprises a fragment of a kinase, phosphatase, protease, protease inhibitor. The transporter, cytoskeletal protein, record or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a mammal an immunogenic response directed against any of the purified polypeptide. The purified polypeptide, or the antibody that binds to this polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polypucleotides are particularly useful for treating or preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translational profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for creating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1149 AA;

```
The invention relates to an isolated nucleic acid comprising at least 10 contiguous nucleotides of any of the 233 polynucleotide sequences given in the specification, or its complement. The nucleic acids encode cancer-associated proteins. Also included are an expression vector comprising the above recombinant nucleic acid or expression vector comprising the above recombinant nucleic acid or expression vector, a microarray for detecting a cancer-associated (CA) nucleic acid comprising at least no contiguous nucleotides of any of the above comprising at least 10 contiguous nucleotides of any of the above nentioned nucleotide sequences, an isolated polypeptide (encoded within an open reading frame of a CA sequence selected from any of the 25 complement), an isolated antibody, (or its antigen binding fragment) that binds to the above polypeptide, a hybridoma that produces the above composition all antibody, a pharmaceutical composition comprising the above contibody and a pharmaceutical excipient, a kit for detecting cancer cells (comprising the antibody cited above, methods for diagnosing cancer confiditional, a method for inhibiting growth of cancer cells in an individual, an electronic library comprising the above polypeptide (or their fragments), methods of screening concertivity of a CA protein (CAP), methods for detecting cancer cells in an individual, an electronic library comprising the above of associated with expression of a polypeptide in a test cell sample, a concertivity of a CA protein (CAP), methods for detecting cancer cells in an individual, an electronic library comprising the above of cancer cells in an individual, an electronic library comprising the above of screening concerns of a polypeptide of modulating the associated with expression of a polypeptide in a test cell sample, a concern of the concerns of

The present sequence represents the human kinase and phosphatase protein (KPP), designated KPP-20. The human KPP sequences from the present invention have cytostatic, antiarteriosclerotic, anti-HIV, antiallergic, nootropic, neuroprotective, cerebroprotective, anti-HIV, antiallergic, and can be used in gene therapy. The human KPP proteins and polynucleotides can be used in gene therapy. The treating and preventing diseases or conditions associated with the decreased expression or overexpression of KPP, such as cell proliferative (e.g. cancer, atherosclerosis), neurological (e.g. proliferative (e.g. cancer, atherosclerosis), neurological (e.g. AIDS, allergies) and developmental (e.g. Hypothyroidism, Cushing's syndrome) disorders, or infections. They can also be used in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of KPP. The KPP or its fragments are useful in screening compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the target polymerides and compounds or nucleily high the expression of the target polymerides.
                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ramkumar J, "...

cc comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleic acids, where the presence of the SNP is correlated with an CC altered risk for myocardial infarction in the individual's CC entripolation where the presence of the SNP is correlated with an CC altered risk for myocardial infarction in the individual. The invention CC further comprises: an isolated nucleic acid molecule comprising at least cc excit sequences given in the specification or its complement and encoding any one of the amino CC enditsing an amino acid sequence given in the specification; an antipolated polypeptide cc that specifically binds to the polypeptide or its antigen-binding CC fragment; an amplified polynucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in CC length, a kit for detecting an SNP in a nucleic acid, comprising the CC polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid, comprising the CC method for identifying an agent useful in treating or preventing CC method for identifying an agent useful in treating or preventing CC method is useful in identifying an individual who has cardiant activity. CC method is useful in identifying an individual who has an increased or composition for treating or preventing myocardial infarction. This sequence represents the protein of a human myocardial infarction. Note: This sequence was not shown in the specification. The sequence has come from CC an electronic sequence listing downloaded from the WIPO website.

The gene sequence was isolated from a chicken brain cDNA library, using, as a probe, a fragment encoding the intracellular domain of the human CD45 sequence. The gene has a comparison of the human CD45 sequence. The gene has a comparison of the human CD45 sequence. The gene has a comparison of the human CD45 sequence of the gene has a comparison of the protein contains a Ser/fhr/Pro-rich region, a fibronectin type III domain comparison of the comparison of the contain several spectrin-like respeats. The sequence has been shown to contain several spectrin-like respeats. The sequence has been shown to contain comparison of the contain several spectrin of the contain several spectrin. Nucleic acid molecules, especially encoding residues 22-1237, 22 contain. Nucleic acid molecules, especially encoding residues 22-1237, 22 contain.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    invention describes performing differential gene'expression analysis between the white adipose tissue (WAT) or stromal vascular tissue (SVT) of any two different mice selected from a group consisting of wild-type, HMGI-C-/-, ob/ob, or HMGI-C-/- ob/ob genotype mice. Accordingly, using this method novel nucleotides and the encoded proteins thereof were identified that are adipocyte specific, and as such can be used for preventing adipogenesis diagnosing and treating diabetes, obssity, hypertension and cardiovascular disease, as well as screening for compounds that can modulate or prevent adipogenesis and treat diabetes or obesity. These compositions exhibit anorectic, antidiabetic and hypotensive activities. This polypeptide sequence is a human homologue of a murine adipocyte specific protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to a novel method for identifying genes that are over-expressed in adipose tissue and as such it provides targets for anti-
cobesity pharmaceutical compositions. Specifically, it refers to a high mobility group I-C protein (HMGI-C) that is associated with obesity and is epistatic to leptin, furthermore, it refers to the ob gene where an autosomal recessive trait is linked to obesity and diabetes. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Identifying adipocyte specific genes, useful for treating obesity or diabetes, and for identifying drug targets, by differential gene expression analysis between adipose tissue or stromal vascular tissue
Diagnosing or monitoring transplant rejection, pancreas, pancreatic islet, lung, bone marrow
                                                                                                                                                                                                                                                                                                        24-APR-2002; 2002US-00131831.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, xenotransplant rejection or mechanical organ replacement rejection, in a individual. The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or viral, bacterial or fungal infection. The present sequence represents a protein encoded by an mRNA sequence of the invention which show altered expression in renal transplantation and expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             methods, s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           rejection, the genes.
                                                                               Identifying an individual who has an altered risk for myocardial infarction by detecting a single nucleotide the individual's nucleic acids.
                                                                                                                                                                                                                                       20-DEC-2002; 2002US-0434778P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cc acid sequences given in the specification; an isolated polypeptide.

cc comprising an amino acid sequence given in the specification; an antibody that specifically binds to the polypeptide or its antigen-binding cc that specifically binds to the polypeptide or its antigen-binding cc fragment; an amplified polynucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in clength; a kit for detecting an SNP in a nucleic acid, comprising the cc polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid molecule; a method of detecting a variant polypeptide; and a cc method for identifying an agent useful in treating or preventing cc myocardial infarction. The novel detection method has cardiant activity. The nucleic acids of the invention may be used in gene therapy. The cc method is useful in identifying an individual who has an increased or composition for treating or preventing myocardial infarction and for preparing a composition for treating or preventing myocardial infarction. This sequence represents the protein of a human myocardial infarction. When this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

CC comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleic acids, where the presence of the SNP is correlated with an CC altered risk for myocardial infarction in the individual's CC entripuous nucleotides where one of the SNP is correlated with an CC altered risk for myocardial infarction in the individual. The invention CC the specification or its complement and encoding any one of the amino CC acid sequences given in the specification; an isolated polypeptide CC comprising an amino acid sequence given in the specification; an antiponated polypeptide CC fragment; an amplified polymucleotide containing an SNP given in the specification; an antiponated polypeptide CC fragment; an amplified polymucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in CC polymucleotide, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid, comprising the polymucleotide, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid, comprising the composition of detecting an agent useful in treating or preventing CC myocardial infarction. The novel detection method has cardiant activity. The nucleic acids of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction. This sequence represents the protein of a human myocardial infarction. Note: This sequence was not shown in the specification. The sequence has come from a composition of sequence listing down in the specification.

CC subjecting a sample, including a cell that contains at least one PTP, to
CC conditions that cause reversible oxidation of PTP; (ii) isolating PTP
CC anaerobically, in presence of a sulfhydryl-reactive agent (II) that
CC irreversibly modifies the thiol group of an invariant Cys in the active
CC site of PTP; and (iii) determining, under reducing conditions, the level
CC of dephosphorylation, caused by PTP, of a labelled substrate (III), where
CC dephosphorylation indicates that an active PTP is present. No details
CC of tests for these activities are given. The method is used to identify
CC reversibly oxidized PTP, also to identify agents that; (a) reversibly
CC modify such PTP; or (b) alter inducible signalling pathways in which PTP
CC are involved. These agents are potentially useful, in human or veterinary
CC medicine, for treating abnormal cell proliferation or growth (cancer);
CC guest vs. host disease; autoimmune diseases; altergy or other
CC immunosuppressed states; metabolic disorders and cell-cycle
CC invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    맑
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Best

rragment of a kinase, phosphatase, protease, which comprises a creamment of a kinase, phosphatase, protease, protease inhibitor, comporter, cytoskeletal protein, receptor or transcription factor. The polypeptide is useful as an immunogenic composition for eliciting in a command an immunogenic response directed against any of the purified composition for eliciting in a composition, is useful for treating cancer. The polypeptide is also composition for eliciting in a composition of the purified composition of the purified composition for identifying compounds that binds to a naturally processed class I or class II MMC-binding polypeptide. The polypeptides and composition cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, compositions, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, compositions the above mentioned diseases. This sequence represents an composition but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma of treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma of treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma of treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma of treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma of treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma of treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma of treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma of treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma of treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma of treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma of treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma of treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma of treating cancer, lymphoma,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC The invention describes a purified polypeptide, which comprises a CC fragment of a kinase, phosphatase, protease, protease inhibitor. The CC transporter, cytoskeletal protein, receptor or transcription factor. The CC polypeptide is useful as an immunogenic composition for eliciting in a CC mammal an immunogenic response directed against any of the purified CC polypeptide. The purified polypeptide or the antibody that binds to this CC polypeptide. The purified polypeptide or the antibody that binds to this CC colypeptide. The polypeptide is also CC useful for identifying compounds that binds to a naturally processed CC class I or class II MHC-binding polypeptide. The polypeptides and CC polynucleotides are particularly useful for treating or preventing CC myeloma, colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanoma, CC treating the above mentioned diseases. This sequence represents an CC treating the above mentioned diseases. This sequence represents an CC expressed protein tag (EPT) isolated from human tissue for translational CC specification but was obtained in electronic format directly from WIPO at Creating or province in the printed specification but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Best Loc

The purified polypeptide, or the antibody that binds to to polypeptide, is useful for treating cancer. The polypeptide is also useful for identifying compounds that binds to a naturally processed class I or class II MHC-binding polypeptide. The polypeptides and polypuloma colon cancer, gastric cancer, adenocarcinoma, sarcoma, melanc lymphoma or leukaemia. These are also useful for screening agents for treating the above mentioned diseases. This sequence represents an expressed protein tag (EPT) isolated from human tissue for translation profiling. Note: This sequence does not appear in the printed specification but was obtained in electronic format directly from WIPC ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                  cytostatic; immunosuppressive; antiallergic; protein tyrosine phosphatase; reversible oxidation; dephosphorylation; inducible signalling pathway; cell proliferation; cancer; guest vs. host disease; autoimmune disease; allergy; metabolic disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes a purified polypeptide, which comprises fragment of a kinase, phosphatase, protease, protease inhibitor, transporter, cytoskeletal protein, receptor or transcription fac polypeptide is useful as an immunogenic composition for elicitin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New polypeptides (e.g. kinases, phosphatases, proteases, transporters, cytoskeletal proteins, receptors or transcription factors), useful for treating cancer, e.g. colon cancer, gastric cancer, sarcoma, lymphoma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a method for identifying a protein tyrosine phosphatase (PTP) that is reversibly oxidized in a cell by: (i) subjecting a sample, including a cell that contains at least one PTP, to conditions that cause reversible oxidation of PTP; (ii) isolating PTP anaerobically, in presence of a sulfhydryl-reactive agent (II) that irreversibly modifies the thiol group of an invariant Cys in the active site of PTP; and (iii) determining, under reducing conditions, the level of dephosphorylation, caused by PTP, of a labelled substrate (III), where condephosphorylation indicates that an active PTP is present. No details of tests for these activities are given. The method is used to identify reversibly oxidized PTP, also to identify agents that: (a) reversibly condifies such PTP, also to identify agents that: (a) reversibly condifies such PTP, or (b) alter inducible signalling pathways in which PTP are involved. These agents are potentially useful, in human or veterinary medicine, for treating abnormal cell proliferation or growth (cancer); guest vs. host disease; autoimmune diseases; allergy or other immunosuppressed states; metabolic disorders and cell-cycle annormalities. This sequence represents one of the PTP enzyme of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

other than a mouse; diagnosis of rheumatoid arthritis in a mammal; an array or gene chip, specific for rheumatoid arthritis; diagnosis or analyses of autoimmune disease or rheumatoid arthritis; diagnosis or efficacy of a candidate drug in vitro for the treatment of collagentinduced arthritis; and reducing the symptoms associated with collagentinduced arthritis; me compositions of the invention have the following activities: immunosuppressive, antirheumatic, antiarthritic, osteopathic, antigout, antiinflammatory, dermatological, and immunomodulatory. The methods and compositions of the present invention are useful for diagnosing and treating autoimmune disease or arthritides, such as rheumatoid arthritis, lupus, ankylosing spondylitis, fibrositis, and an immune disease caused by an infectious agent. This sequence reparts and protein sequence relating to the genes used in the analysis and treatment of autoimmune diseases or arthritides. Note: This sequence is not shown in the specification. It has been supplied in an electronic format from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     patient sample containing mRNA, analysing gene expression using the mRNA that results in a gene expression signature of the mRNA, and using that gene expression signature to diagnose or analyse the autoimmune disease or arthritides in the patient, where gene expression of at least 60% of the genes correlates with that of the gene signature. The invention further comprises: a treatment of rheumatoid arthritis; identification of genes for targeting in the treatment of rheumatoid arthritis in a mammal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; Page; 56pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             autoimmune disease or arthritides.
